

COMPETENCE IN FILMS

POLIFILM EXTRUSION

POLIDUPLEX

DESCRIPTION:

The newly developed POLIDUPLEX is an effective combination of vacuum film and protective silage sheet on one roll. It provides an optimal coverage of your silage and secures best conditions for the production of high quality fodder. Double protection in half time is ensured.

CONVINCING ADVANTAGES FOR THE USER:

- Improved handling
 Silage sheet and vacuum film are combined on one roll
- No mechanical bond between silage sheet and silage undersheet Immediate adoption of the vacuum film to the silage
- Significant time savings
 Thanks to two steps in one
- Highest flexibility
 Use of 100 % regrinds free raw materials
- Extreme tensile strength punctures resistance
 Considerably higher film thicknesses compared to existing combination products
- Effortless and low-cost disposal of waste
 Silage sheet and vacuum film are made of polythene and can be recycled together

FILM STRUCTURE:

3-layer coextruded PE silage sheets and vacuum film ensure highest gas tightness and perfect coverage of silage.

DIMENSIONS:

Widths: 8, 10, 12, 14, 16 and 18 m Lengths: 25, 50 and 100 m

UV STABILITY:

1 year guaranteed (based on 110 kly)
